PROFILE

I am a Full-Stack Developer with 3 years of experience in building secure, scalable, and high-performance web applications. Skilled in Python (Django & FastAPI) and JavaScript (React), I specialize in developing robust backend architectures and dynamic, user-friendly frontends.I also create custom Telegram bots, leveraging API integrations and automation to deliver efficient and innovative solutions.

EXPERIENCE

Django Developer

2025 **UNISA Research Management System**

I built a comprehensive Django-based research management system designed to track and analyze academic publications, authors, and research groups at the University of South Australia (UNISA). The system integrates with multiple academic APIs to automatically fetch publication data and provides detailed analytics and reporting capabilities.

Fullstack developer and CEO

2025 - present **Telechannels**

I developed a secure Escrow market on top of TON blockchain that enables users to Buy and sell any telegram channels and groups which facilitated over 50 transactions and about 300$ as of july 2025 and growing

Telegram Bot developer

2024 **Habesha grid**

I built a telegram casino bot for a private client using python and also integrated it with a secure local payment provider (Chapa)
